

Corelight Business Continuity Planning Statement

Corelight, Inc. (“**Corelight**”) is committed to operational resilience. Corelight leverages business continuity planning and processes (“**BCP**”) to minimize the impact of business disruptions on Corelight’s overall business operations.

Overview

The following Corelight critical business functions are responsible for contributing to Corelight’s BCP:

- People
- Engineering
- Customer Success
- Information Security
- Finance & Business Services
- Supply Chain

All critical business functions must identify critical process dependencies which include systems, applications, people, facility, vendor/supplier, and any other necessary resources to recover the critical function.

Elements of Corelight’s BCP

Corelight’s BCP includes:

Business Impact Analysis

Evaluating the critical business processes that have the potential, if disrupted, to result in a major impact to Corelight’s business operations. Corelight’s business impact analysis is focused on the reliability of crucial resources, including key personnel, IT infrastructure and applications, third-party service providers, and scalable and resilient offerings.

Security Incident Response

Integrating security incident response into business continuity.

Crisis Management and Response

Providing for the safety and welfare of Corelight personnel and communicating status updates both internally as well as externally depending upon the event.
