

Corelight Trust Center User Guide

Last Updated: February 26, 2026

What is the Corelight Trust Center?

Corelight's Trust Center (available at www.corelight.com/trust-center) provides numerous helpful resources related to Corelight's security, privacy, compliance, resiliency, and trusted AI.

Alongside the Corelight Trust Center, Corelight maintains a Trust and Compliance [self-service portal](#) that offers on-demand access to Corelight's security and compliance documentation.

What are the benefits of Corelight's trust-related resources?

- **Time savings.** Corelight customers, prospective customers and third-party auditors acting on behalf of such customers can easily access trust-related documentation and catalogued links to important information.
- **Simplified process.** on-demand access to Corelight security and compliance documentation without having to engage an individual Corelight team member through a manual, offline process.

Who may access the Corelight Trust Center?

Corelight Trust Center documents are available to anyone visiting www.corelight.com/trust-center.

While anyone may view and navigate within Corelight's Trust and Compliance self-service portal (located at <https://corelight-inc.trustshare.com/home>), a request to access and download specific documents must be submitted within the portal.

How do I access all of the resources posted to Corelight's Trust and Compliance self-service portal?

The Corelight Trust and Compliance self-service portal is publicly accessible at <https://corelight-inc.trustshare.com/home>. Once you've navigated to the Trust and Compliance self-service portal, simply click "Request Access" and after authenticating, you can access the entirety of the documentation library.

Access to private documents will require a click-through agreement with Corelight's standard confidentiality obligations.

What is a "Trust Package"?

Each Trust Package is a curated bundle of compliance documents related to a specific Corelight offering. There are two Trust Packages currently available:

- **Corelight Investigator Trust Package.** compliance documents related to Corelight's cloud-based software as a service (SaaS) platform; and
- **Corelight Corporate Trust Package.** compliance documents related to Corelight's overall corporate security program (for use with Corelight's on-premises products, i.e., Corelight Sensors).

Trust Packages may be requested from your Corelight account executive.
