

## Data Sheet

# Cloud Sensors

### CLOSE VISIBILITY GAPS IN THE CLOUD

Corelight enables security teams to extend visibility across hybrid and multi-cloud environments with consistent, comprehensive uniform telemetry enriched with control plane data.

Accelerate incident response and unlock threat hunting capabilities by providing analysts managing diverse environments with the actionable insights they need in real-time.

### DETECT + DISRUPT CLOUD THREATS

Identify and disrupt attacks such as data exfiltration, service enumeration, and more. Corelight's detections tie alerts to rich, Zeek®-based evidence, identifying threats often hidden within legitimate or encrypted traffic.

### DRIVE EFFICIENCY IN HYBRID ENVIRONMENTS

Streamline and accelerate analyst workflows by reducing tool sprawl and increasing efficiency. Corelight consolidates NSM, IDS, and PCAP functionality into a unified dataset, streamlining analyst workflows and reducing tool sprawl. With native packet mirroring support for major cloud platforms, organizations can:

- Increase operational efficiency
- Provide an alternative to third-party packet-brokers
- Decrease the risk of misconfiguration
- Accelerate application deployment timelines

Our solution was designed with ease and flexibility in mind from capacity-based licensing to automation of deployment using Terraform templates.

### TOP USE CASES INCLUDE:

---

Complete visibility of hybrid and cloud environments

---

Detailed enrichment of network traffic with control plane data

---

Support for cloud-native packet mirroring (GCP NSI, Azure vTAP)

---

Leverage cloud-specific detections to disrupt attacks

---

Discover behavioral anomalies across multi-cloud environments

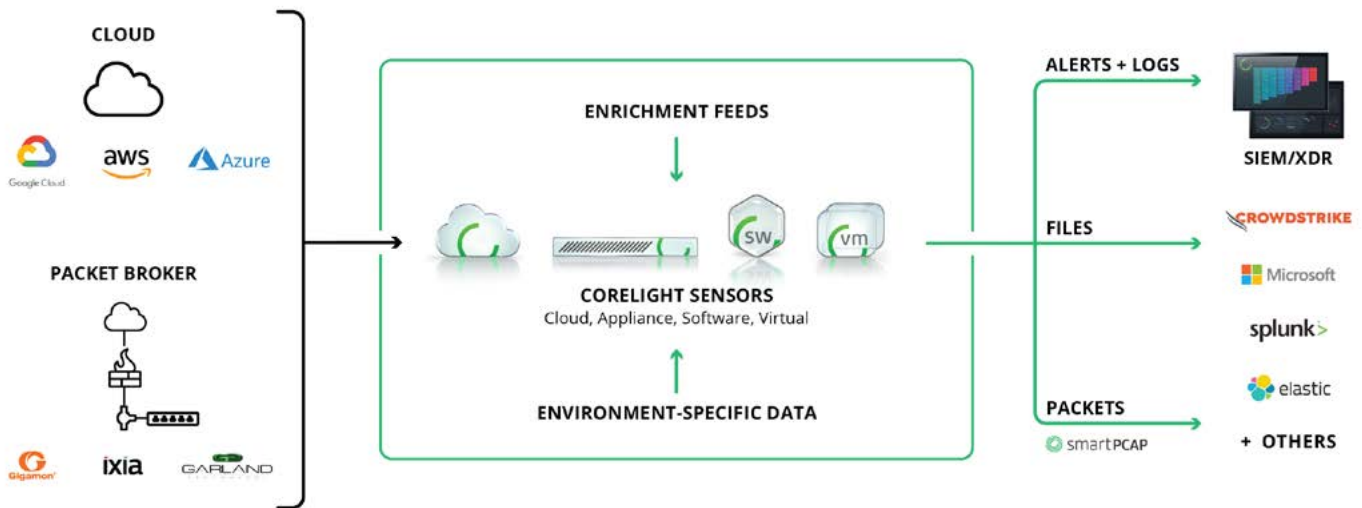

---

### Cloud solutions to fit your environment

## PRODUCT CAPABILITIES

- Consolidate NSM, IDS, and PCAP functionality
- Uniform telemetry across AWS, GCP, and Azure
- Automatic correlation of network + cloud-native data
- Support for cloud-native packet mirroring for AWS, GCP and Azure
- Automate deployment with Terraform templates
- Detect resource enumeration and data exfiltration
- Identify all services across cloud environments
