

## Data Sheet

# Cloud Sensors

### CLOSE VISIBILITY GAPS IN THE CLOUD

Corelight enables security teams to extend visibility across hybrid and multi-cloud environments with consistent, comprehensive uniform telemetry enriched with control plane data.

Accelerate incident response and unlock threat hunting capabilities by providing analysts managing diverse environments with the actionable insights they need in real-time.

### DETECT + DISRUPT CLOUD THREATS

Identify and disrupt attacks such as data exfiltration, service enumeration, and more. With alerts tied to rich evidence, Corelight's detections identify attacks that are often disguised as legitimate traffic or tunnel through encrypted traffic. Extend your TTP coverage across hybrid and multi-cloud environments.

### DRIVE EFFICIENCY IN HYBRID ENVIRONMENTS

Streamline and accelerate analyst workflows by reducing tool sprawl and increasing efficiency. Corelight consolidates NSM, IDS, and PCAP functionality and a uniform dataset across hybrid and multi-cloud environments.

Our solution was designed with ease and flexibility in mind from capacity-based licensing to automation of deployment using Terraform templates.

### TOP USE CASES INCLUDE:

---

Complete visibility of hybrid and cloud environments

---

Detailed enrichment of network traffic with control plane data

---

Leverage cloud-specific detections to disrupt attacks

---

Discover behavioral anomalies across multi-cloud environments

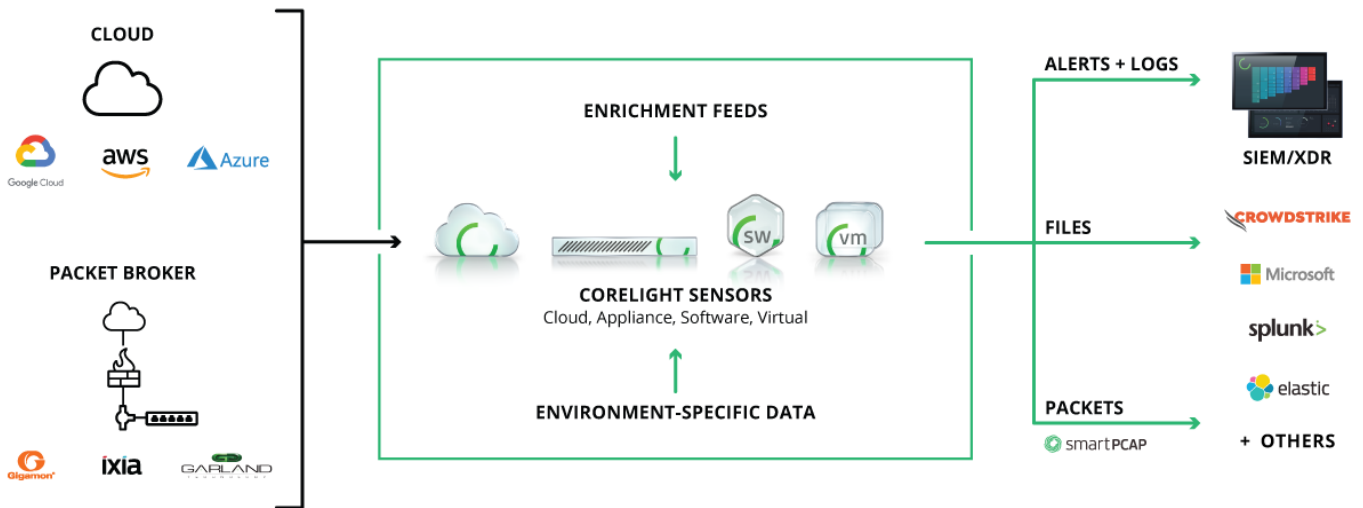

---

### Cloud solutions to fit your environment

## PRODUCT CAPABILITIES

- Consolidate NSM, IDS, and PCAP functionality
- Uniform network telemetry across cloud providers
- Automatic correlation of network + cloud-native data
- Automate deployment with Terraform templates
- Identify all services across cloud environments
- Detect enumeration of resources across multiple regions
- Detect and disrupt data exfiltration
- Available for AWS, GCP, and Azure
